NWO grant for KIN research group
The Knowledge, Information and Networks (KIN) research group has received an NWO grant for their proposal 'Crossover collaboration for digital innovation'. This research project will focus on the development of digital innovations that require heterogeneous partners from different disciplines and industries to collaborate, for instance independent fashion designers and institutionalized energy corporations, technology and arts.

The research will be conducted by Marleen Huysman, Hans Berends, Fleur Deken and Maura Soekijad. Their proposal was written together with TU Delft (Industrial Design). This is the second larger NWO grant that the KIN research group section has received after last years’ grant for research on Human Capital and New Ways of Working.

Crossover collaborations for digital innovation, such as mentioned above, are radically different from more traditional inter-organizational collaborations due to the specific characteristics of digital innovation. The research project aims at:

- Connecting. To improve the understanding of how brokers involve and engage heterogeneous partners;
- Creating. To develop new approaches of design thinking that are required to create crossover digitalized products and services;
- Coordinating. To develop insights on how coordination leads to the generation of new business models for crossover digital innovation.

This interdisciplinary research combines KIN's expertise on design for business, collaborative innovation and knowledge management and information technology. The research will be conducted in collaboration with business partners such as Philips Design, Agu and de Waag Society. Vacancies for the PhD positions will be published soon.
