NWO TOP grant of 885K Euro for logistics research in “Network planning and contract design for cross chain control in cash networks”

The FEWEB logistics research group (Wout Dullaert, Sander de Leeuw, Olli Bräysy, Pietro De Giovanni and Karin de Smidt-Destombes) received an NWO TOP grant of 885K Euro together with the OR group (Bernd Heidergott, Joaquim Gromicho and Leen Stougie) for research in optimizing cash distribution networks. It is one of four proposals that have been awarded a grant during the recent NWO TOP grant proposal round. The TOP grant round welcomed proposals related to the Social Infrastructure research agenda, the research agenda of the top sector Logistics, or the research agenda of the top sector Creative Industries. Research groups were required to set up a consortium with external public and/or private partners willing to contribute to the execution and funding of the research. In total 26 proposals have been submitted for funding of which four have been awarded with a grant.

The winning VU project is backed by industrial partners Geld Services Nederland (GSN) and ORTEC, who contribute 20% of the total project value as well as their leading professional expertise. GSN, a joint venture of the major banks in the Netherlands, manages the cash distribution in the Netherlands. ORTEC is a global software provider in the area of optimization of logistics planning. Despite its practical relevance and academic research challenges, the distribution of cash has received relatively little scientific attention. The project aims to fill this gap by developing strategies and methods to increase efficiency and effectiveness of distribution of cash in networks by integrating transport, maintenance and inventory decisions. A core difficulty in developing these strategies and methods is that a minimum level of uncertainty needs to be guaranteed for security reasons to prevent that distribution routes become predictable. The project is furthermore focused at developing contracts to improve coordination between relevant stakeholders in the cash distribution network.

The grant enables the team to appoint two PhD candidates as well as a post doctoral researcher for a period of 4 years. The announcement (in Dutch) is also available on the NWO site.
