KIN Summer School - 26 till 29 June
Innovation has become a major topic of study in the field of information systems. These innovations are mainly due to increased knowledge-intensity of organizational performance, the growing distributed and mobile forms of working and organizing, and the emergence of digitalization in processes and products. As a result, there is a need among scholars to understand in more detail how to study knowledge intensive practices that emerges from the interplay between (new) technologies and new ways of working as well as the management thereof. A significant group of scholars, spread over Europe and US/Canada, are using various practice and process approaches to study such new ways of working, innovating and organizing and publishes in a growing number of related international journals. Each year, a different selection of this group of scholars come together in Amsterdam.

Programme and faculty

ABRI Seminar Paul Leonardi - 4 July
Paul Leonardi will hold a seminar on July 4 from 12:00 till 13:30 in room HG-08A20. More information will later be published on the ABRI website.
